By- Saleem Ahmed Sir

Topics to be covered

Equation of a straight line

Slope = $m = \tan \theta$

Slope = m

Slope = $-\sqrt{3}$

SKC

* (हर जगह slope const है)

* Straight line का slope
हर जगह const होता है

→ will use in kinematics

$$\text{slope} = \tan \theta = \frac{y_2 - y_1}{x_2 - x_1}$$

$$\text{slope of line joining A to B} = \frac{y_2 - y_1}{x_2 - x_1} = \frac{9 - 5}{7 - 4} = \frac{4}{3} = \tan \theta \quad \boxed{\theta = 53^\circ}$$

$$\text{slope} = \frac{3-5}{7-2} = -\frac{2}{5}$$

Q

Q

$$\begin{aligned} \text{slope} &= \frac{4-0}{4-0} = 1 \\ &= \tan \theta = 1 \\ &\theta = 45^\circ \end{aligned}$$

Q

Q

Equation of straight line

- $y = mx + c$

$m \rightarrow \text{slope} = \tan \theta = \frac{y_2 - y_1}{x_2 - x_1}$

At $x=0$, $y = 0 + c = c \equiv y \text{ intercept}$

$c \rightarrow x=0$ पर 'y' की Value.

Q $y = \sqrt{3}x + 10$

$y = mx + c$

$m = \sqrt{3} = \text{slope} = \tan \theta$

$\theta = 60^\circ$

$c = 10$, at $x=0$, $y = 0 + 10$

$$y = mx + c$$

$$Q \quad y = \frac{x}{\sqrt{3}} + 5$$

$$m = \frac{1}{\sqrt{3}} = \tan \theta \quad \theta = 30^\circ$$

$$\text{At } x=0, y=5$$

or

$$c = 5$$

$$Q \quad y = x - 10$$

$$m = 1 = \tan \theta$$
$$\theta = 45^\circ$$

$$Q \quad y = -\sqrt{3}x + 10$$

$$m = -\sqrt{3}$$

$$C = 10 \quad (\text{at } x=0, y=10)$$

$$\tan \theta = -\sqrt{3}$$

$$\theta = 120$$

$$Q \quad y = -\frac{x}{\sqrt{3}} - 10$$

$$m = -\frac{1}{\sqrt{3}}$$

$$C = -10$$

Q $y + x\sqrt{3} - 10 = 0$

$$y = -x\sqrt{3} + 10$$

$$m = -\sqrt{3}, c = 10$$

Q $y + \frac{x}{\sqrt{3}} + 10 = 0$

$$y = -\frac{x}{\sqrt{3}} - 10 \quad (\text{same ques})$$

$$y = mx + c$$

Draw st. line

① $y = 2x - 4$

② $y = 4x - 2$

③ $y = -4x - 10$

④ $2y = 4x - 10$

~~Slope = 4~~

Q $2y = 4x - 10$

$y = 2x - 5$

slope = 2
 $c = -5$

Q $6x + 3y + 10 = 0$

$3y = -6x - 10$

$y = -2x - \frac{10}{3}$

Q $-4x + 2y - 20 = 0$

$2y = 4x + 20$

$y = 2x + 10$

Q $y = 4x$

$C=0$

Q $y = x$

$C=0$

Q $y = -4x$

$C=0$

Q $y = -x$

$C=0$

Q

$$\vec{F}_{sp} = -k\vec{x}$$

$$\tan\theta = k$$

Q

$$a = -\omega^2 x \text{ (SHM)}$$

$$\tan\theta = \omega^2$$

$$a = -4x$$

$y = mx + c$

अगर $c=0$, $y = mx$

Q2 Electric field inside non-conducting sphere graph Vs r is given as

If $\frac{r_A}{r_B} = 3$

find $\frac{Q_A}{Q_B} = ?$

$$E_{\text{inside}} = \frac{\rho r}{3\epsilon_0}$$

$$\rho = \frac{\text{Charge}}{\frac{4}{3}\pi R^3}$$

At $t=0$ rod is drop

Const
velocity
 \uparrow u (wrt rod)

Last 15 min
of first class

Homework

— की की when it will reaches
to its initial point (same height
from ground)

सोचना

सोचो \Rightarrow Winner

सोचो \rightarrow Not winner

Basic

position

Slope = velocity

$$v_A = 1$$

$$v_B = \frac{1}{\sqrt{3}}$$

$$|\tan \theta| = |\tan (180 - \theta)|$$

$$\theta < 90 \longrightarrow$$

Home Work

- DPP
- KPP (mix problem of language problem + Straight line)
